

Main Assignment for Manual Testing

Objective:

Design comprehensive Test Strategy Document, Manual test cases & test scenarios for the given application, ensuring coverage of critical functionalities and RTM.

Tasks:

1. Test Strategy Preparation (Including Test Plan):

- Define the scope, objectives, and approach for testing.
- Identify the types of testing to be conducted (e.g., functional, regression, integration).

2. Scenario Identification:

- List all possible user scenarios, including edge cases.
- Prioritize scenarios based on risk and impact.

3. Test Case Coverage:

- Ensure all identified scenarios are covered.
- Map scenarios to requirements for complete coverage.

4. Test Case Designing:

- Write detailed test cases with clear steps, expected results, actual results, and preconditions.
- Include both positive and negative test cases.

5. Requirements Traceability Matrix (RTM):

- Create an RTM to trace each test case back to its corresponding requirement.
- Ensure all requirements are covered by at least one test case.

6. Bug Reporting & Tracking

- Log all defects found during testing using the provided JIRA template in excel.

- Ensure each bug report includes all essential details (summary, steps to reproduce, expected and actual results, severity, etc.).

Standards and Parameters:

- Clarity: Test cases should be clear and concise.
- Completeness: Ensure all functionalities are covered.
- Consistency: Follow a consistent format for all test cases.
- Traceability: Maintain traceability between requirements and test cases.
- Reusability: Design test cases that can be reused for future testing cycles.
- Documentation: Document all findings and observations clearly.

Submission:

- Submit the test strategy document.
- List of identified scenarios.
- Detailed test cases.
- RTM.
- Defect Tracking

Good luck!
